

TaxiCamONE

Does your job expose you to crime and abuse?

Some licensing authorities have made CCTV in taxis and private hire vehicles compulsory and have seen dramatic crime reduction as a result. Drivers everywhere deserve to have the same protection.

That's why VerifEye, the world leader in Taxi CCTV, developed TaxiCamONE. We made it simple for owner/operators to install and use, but did not sacrifice any essential features or performance in the process. You won't find another in-car camera product that works as well.

TaxiCamONE Features

- True High Definition (1080p) video recording and playback
- Built-in infra-red illuminator and IR-corrected lens for clear pictures even at night
- Built-in microphone, synchronized audio
- Circular buffer continuous recording – newest records over oldest
- System health status indicator warns if recording stops
- User selectable video frame rate and compression/quality settings
- User selectable secure mode (encrypted, password protected file storage)
- Uses standard PC media players – no proprietary software required for playback
- Records to separate USB memory stick (allows data to be hidden)
- Real-time output for viewing on laptop computer

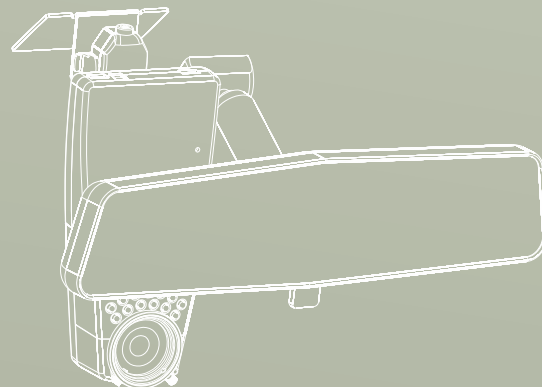

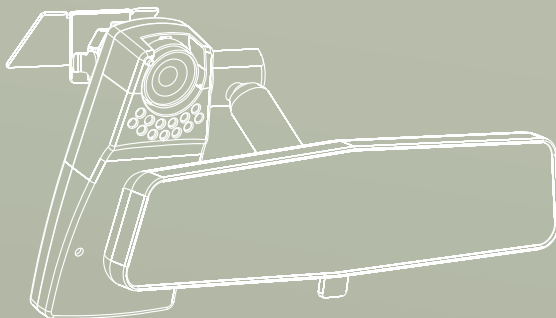

Decrypted recordings may be reviewed on any PC media player

Records to USB Flash Drive

Connects to 12V accessory power

Can be configured to work in above-mirror or below-mirror positions
